Professional Summary

Results-driven MERN Stack Developer with hands-on experience designing, developing, and deploying full-stack web applications using MongoDB, Express.js, React.js, and Node.js. Currently working as a MERN Developer Intern at Micro Data Tech, contributing to production-level applications involving REST APIs, authentication systems, database design, and responsive frontend development. Skilled in building scalable, performance-optimized applications with a strong focus on clean code, reusable components, API integration, and secure JWT-based authentication. Passionate about solving real-world problems and continuously improving software engineering practices through modern tools, frameworks, and best development practices.

Core Competencies

Programming Languages

JavaScript (ES6+), Python, C++, Java, HTML5, CSS3

Backend Technologies

Node.js, Express.js, RESTful APIs, Authentication & Authorization, CRUD Operations, Middleware, Backend Architecture

Deployment & Version Control

Git, GitHub, Netlify, Vercel, Deployment Workflows

Authentication & Security

JWT Authentication, Role-Based Access Control, Protected Routes, Secure API Design

Collaboration & Communication:

Team Collaboration, Agile Development, Technical Problem Solving, Cross-Functional Communication

Frontend Development

React.js, JavaScript (ES6+), HTML5, CSS3, Tailwind CSS, Responsive UI Design, Component-Based Architecture, State Management

Databases & Data Technologies

MongoDB, Mongoose, Data Modeling, Schema Design, Query Optimization

Development Tools:

VS Code, Postman, GitHub, Chrome DevTools

AI-Assisted Development

GitHub Copilot, Cursor, Claude, ChatGPT, AI-Augmented Development Workflows

Other Skills:

Debugging, Problem Solving, Performance Optimization, API Integration, Agile Collaboration

Professional Experience

Full Stack Engineer, MERN Stack Developer

03/2026 – Present

DHA Phase IX

- Developing and maintaining scalable full-stack web applications using the MERN Stack (MongoDB, Express.js, React.js, Node.js)
- Building responsive and reusable UI components using React.js, Tailwind CSS, and modern JavaScript (ES6+)
- Designing and integrating RESTful APIs for seamless frontend-backend communication
- Implementing secure JWT-based authentication and authorization systems
- Developing and managing database structures using MongoDB and Mongoose
- Optimizing application performance, debugging issues, and improving scalability
- Collaborating with development teams using Git and GitHub workflows

- Participating in code reviews and following clean code and best practices
- Working on real-world production features with focus on usability and performance
- Improving application security through protected routes and role-based access control

Projects

DesiFy — Mood Based Music Recommendation App

- Designed and developed a full-stack web application that provides personalized music recommendations based on user-selected mood and preferences, creating an interactive and engaging user experience
- Integrated YouTube API to fetch and stream real-time music content dynamically, ensuring users get updated and relevant media recommendations
- Implemented secure JWT authentication system for user registration, login, and session management with protected routes
- Built a responsive and modern frontend using React.js and Tailwind CSS, focusing on smooth UI interactions and mobile-friendly design
- Developed reusable components and managed application state effectively to improve scalability and maintainability
- Optimized frontend performance and ensured smooth navigation across different sections of the application
- Deployed the application on a live hosting platform with production-ready configuration and environment setup

Tech Stack: React.js, Node.js, Express.js, MongoDB, YouTube API, JWT

Live: <https://desifyy.netlify.app/> 

NotesShare — Academic Resource Sharing Platform

- Built a complete full-stack academic platform that allows students to access and share educational resources including notes, lectures, assignments, and past papers in an organized way
- Designed a structured semester-wise categorization system to improve accessibility and simplify content discovery for users
- Developed RESTful APIs using Node.js and Express.js, enabling smooth communication between frontend and backend services
- Implemented MongoDB database architecture with optimized schema design for scalable storage and efficient data retrieval
- Enhanced user experience by implementing fast navigation, categorized filtering, and intuitive UI design for academic content browsing
- Focused on improving academic collaboration by enabling centralized access to study materials for students

Tech Stack: React.js, Node.js, Express.js, MongoDB

Live: <https://ucpian.vercel.app/> 

Teacher Book — Faculty Information Management System

- Developed a full-stack web application that enables users to search and view detailed faculty profiles using a name-based search system
- Implemented a dynamic profile system displaying teacher information such as profile image, email, office timings, department, and professional biography
- Built backend services using Flask (Python) with structured routing, request handling, and modular architecture for better maintainability
- Designed and integrated SQLite/PostgreSQL database to efficiently store and manage faculty records with optimized queries
- Created a responsive and user-friendly frontend using HTML, CSS, JavaScript, and Bootstrap, ensuring accessibility across devices
- Implemented fast and efficient search functionality to retrieve teacher records instantly from the database

- Focused on improving accessibility and centralization of academic staff information for students and administrative users
- Ensured separation of frontend and backend for scalability and long-term maintainability of the system

Tech Stack: Python, Flask, SQLite/PostgreSQL, HTML, CSS, JavaScript, Bootstrap

Education

Bachelor's Degree in Computer Science

University of Central Punjab

09/2023 – Present

Lahore, Pakistan
